Login

Wireframe

A wireframe of a login form. The form is a white rounded rectangle centered on a light blue and purple abstract background. It has a title 'Login' at the top. Below the title are two input fields, each labeled 'input' on the left and 'm' on the right. Below the input fields is a button labeled 'button' and a link labeled 'link'.

Angular

An Angular implementation of the login form. The form is a white rounded rectangle centered on a light gray background. It has a title 'Login' at the top. Below the title are two input fields. The first is labeled 'Username' and has a placeholder 'Enter your username'. The second is labeled 'Password' and has a placeholder 'Enter your password'. Below the input fields is a green button labeled 'Login'. At the bottom, there is a link that says 'Don't have an account? Register'.

Register

Wireframe

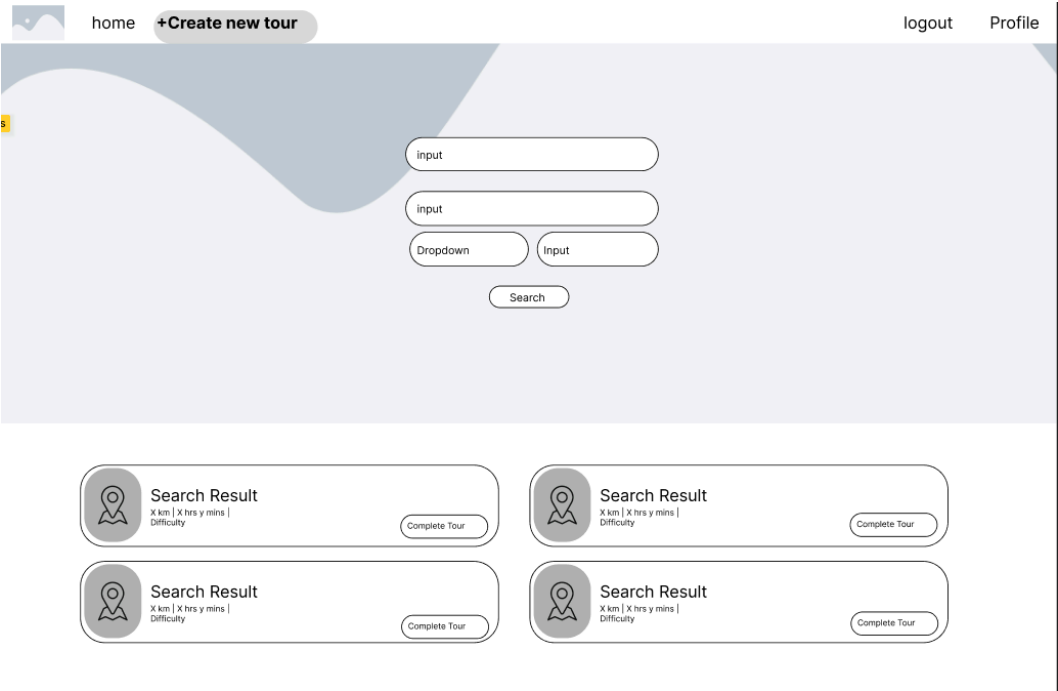

A wireframe of a registration form titled "Register". The form is centered on a light blue background with abstract shapes. It contains two input fields labeled "Input", a button labeled "Button", and a link labeled "Link".

Angular

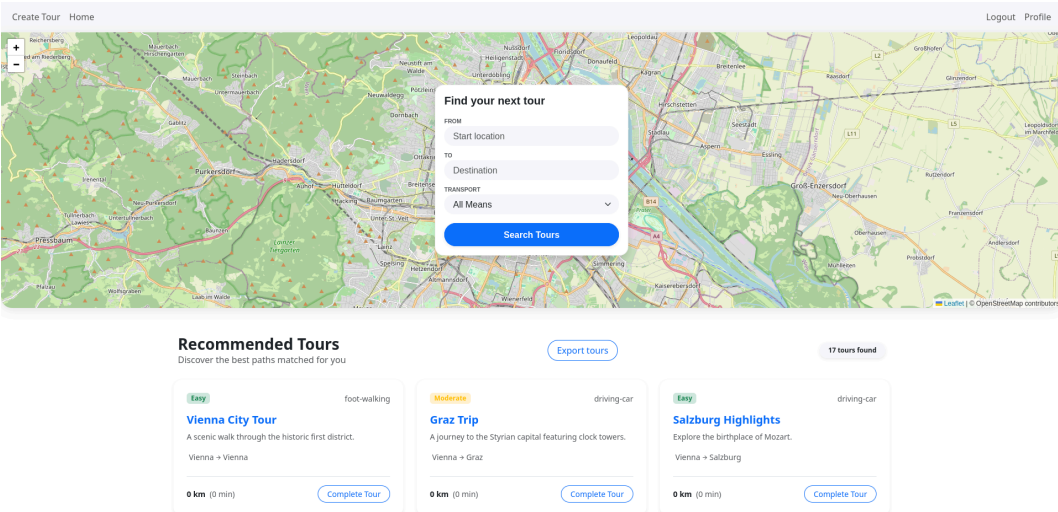

An Angular implementation of the registration form titled "Register". The form is centered on a light gray background. It includes a link "Already have an account? Login" in green. The form fields are labeled "Username", "Password", and "Confirm Password", each with a placeholder text "Enter your username", "Enter your password", and "Confirm your password" respectively. A green "Register" button is at the bottom.

Main

Wireframe

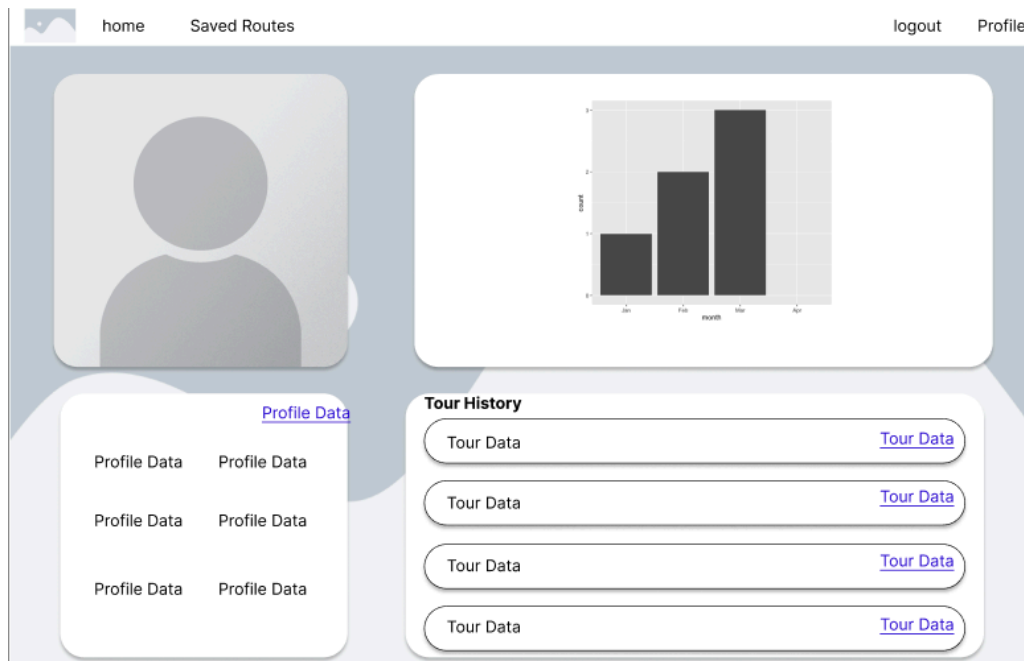

Angular

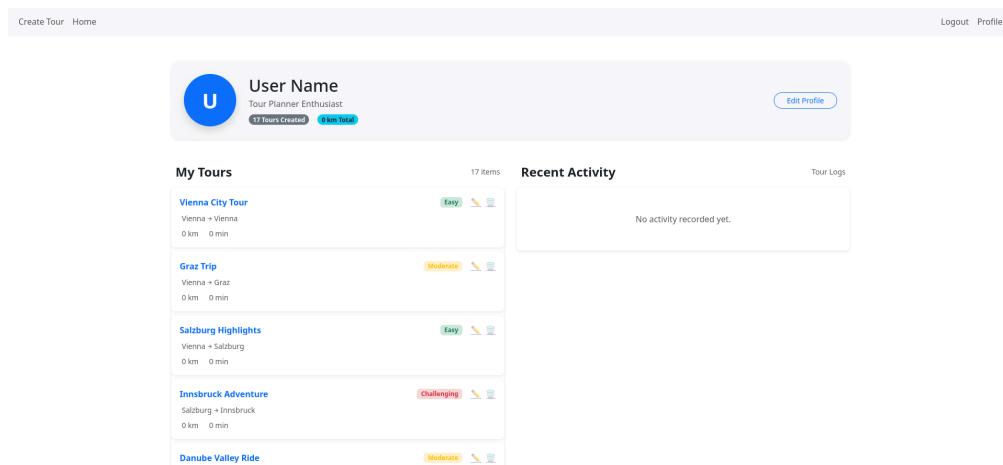

Profil

Wireframe

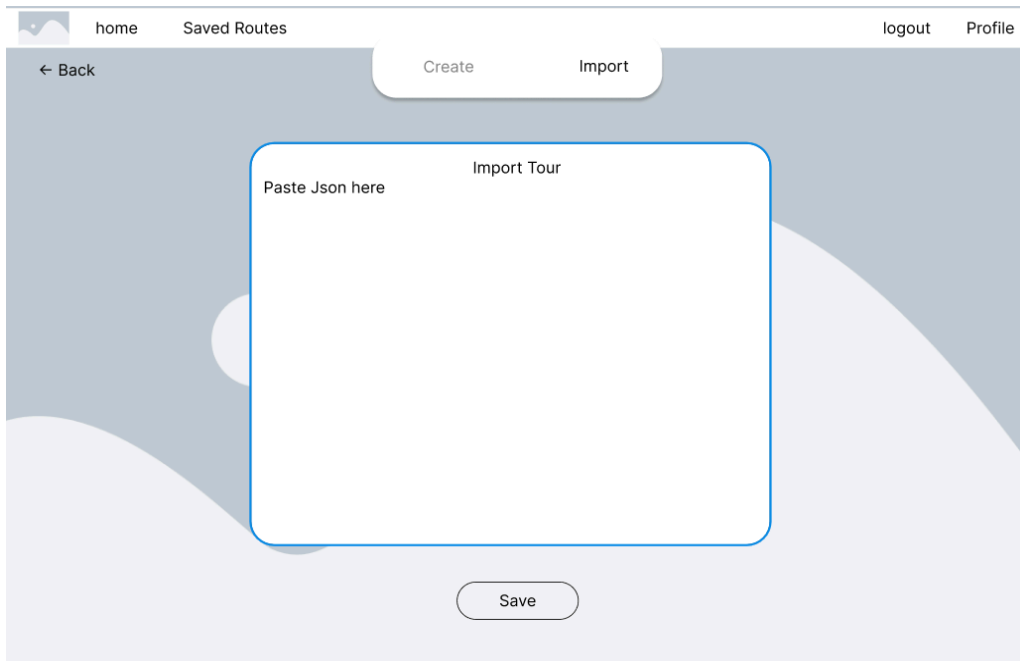

Angular

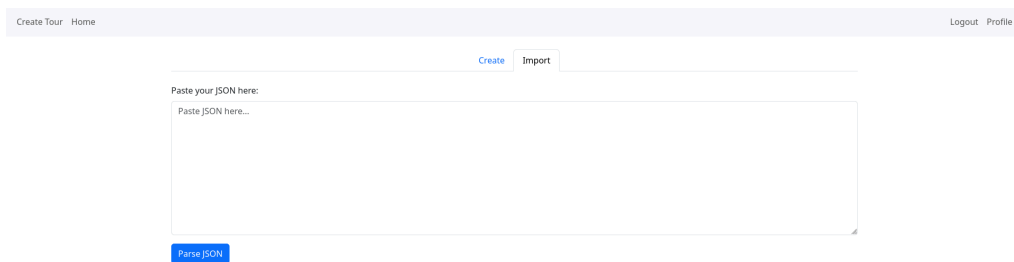

The user has a good overview about his data: On the top there is some data about how many tours and how many km in total he already has completed. On the left side he sees all tours he created and on the right side his completed tours, which are the tour logs. Additionally when he clicks on a completed tour he gets an overview about the data of the logs, in case he wants to change something.

Import Tours

Wireframe

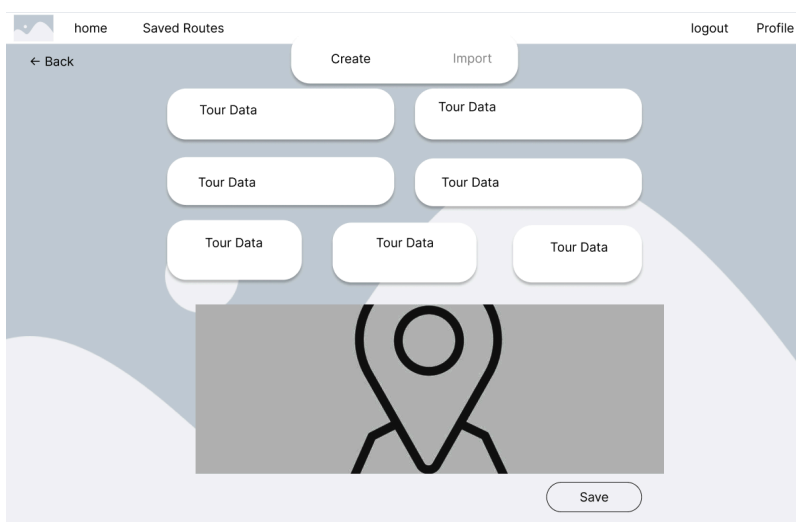

Angular

Here the user has the option to import tours via json text. He needs to paste the text into the box and press on save. Then all tours will be created.

Create Tour manually

Wireframe

[Create Tour](#) [Home](#)

CreateImport

Tour Name *

Must be 3-100 characters

Start Location *

End Location *

Difficulty *

Select difficulty

Description *

Must be 10-500 characters

Transport Type *

foot-walking

Distance (km) *

0

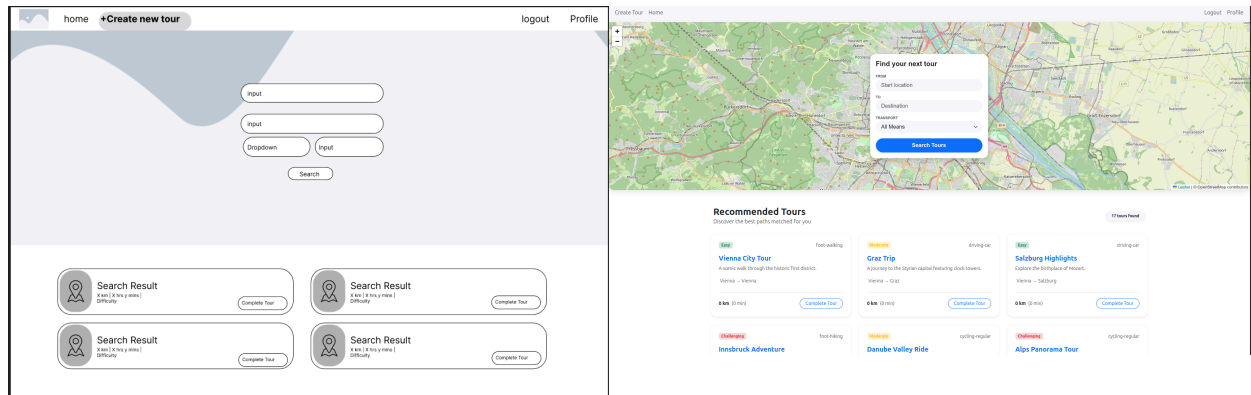

Must be between 0.1 and 10,000 km

Estimated Time (minutes) *

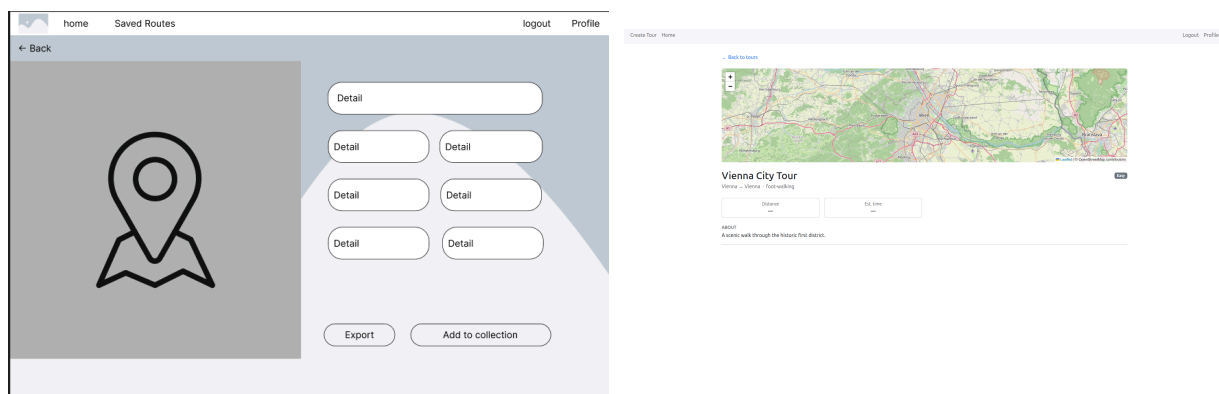

Here the user can create tours manually and specify things like: Tour Name, Start Location, End Location, Difficulty, etc. After pressing save at the end the tour will be saved on the backend.

Filter and Display Tours.

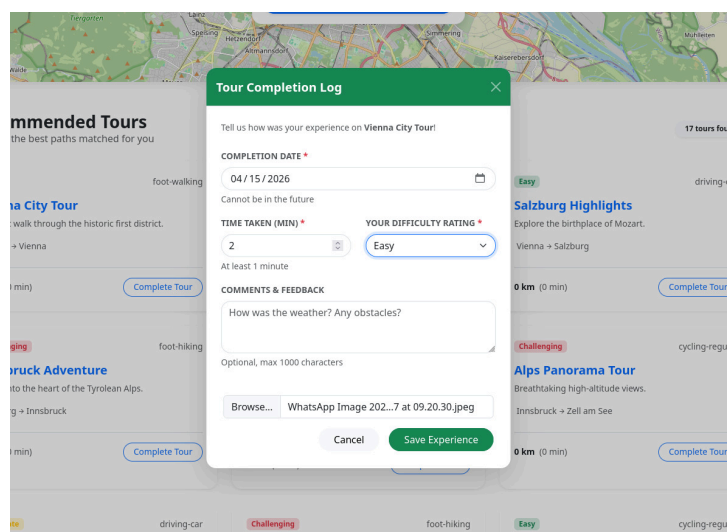

The user can browse among the tour options displayed below and has the opportunity to filter the results based on Transport type.

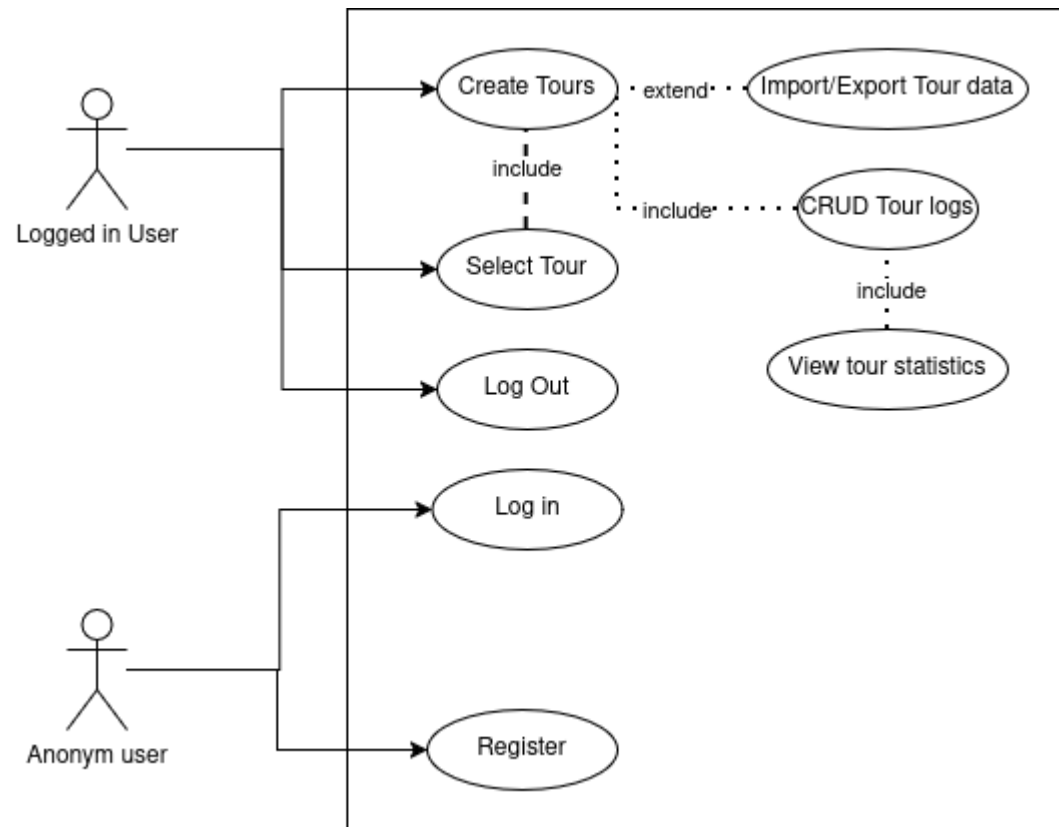

If the click on a Result in general, they can view the map and the details of the selected tour:

If they click on the Complete Tour, a modal pops up, where they can create a tour log.
